> This guide is meant for Susano users, if you don't own a Susano license, go get a better cheat lol.

What is "spoofing"?

We explained this in the previous guide, go check it out.

How to spoof?

Now that you understand how does spoofing actually work, you can go ahead and spoof your FiveM ban.

> [⚠️] NOTE: The Susano spoofer is only **temporary**! That means your HWID will be spoofed only until the next time your restart/shutdown your computer.

Prerequisites

- CPU Virtualization enabled in BIOS/UEFI
- Hyper-V Disabled
- A **fresh** Rockstar account
- FiveM unlinked from Discord *(User Settings -> Authorized Apps -> FiveM -> Deauthorize)*
- (*optional*) New Steam account *(new or fully private accounts might trigger some suspicion filters)*
- (*optional*) Xbox Services uninstalled
- (*optional*) Solid, preferably residential VPN
- (*optional*) New Discord account *(preferably aged at least a few weeks to avoid triggering suspicion filters)*

Before Spoofing

Hyper-V Disabled in Windows

You can do this through the Windows Control Panel, or use this CMD command as Admin:

```
Disable-WindowsOptionalFeature -Online -FeatureName Microsoft-Hyper-V-All
```

Optionally, you can also use this command if the first one fails:

```
dism /online /disable-feature /featurename:Microsoft-Hyper-V-All
```

Make sure to restart your computer after running the command.

Delete certain FiveM folders that contain cached data

FiveM leaves folders on your computer that contain data about your account. You need to delete these folders before spoofing yourself. Specifically, it's these folders:

- `%appdata%\Local\DigitalEntitlements` - Contains information about your Rockstar account
- `%appdata%\Roaming\CitizenFX` - Various configuration files for FiveM and GTA V
- `%localappdata%\FiveM\FiveM.app\citizen` - FiveM configuration data, LUA rutimes, etc.
- `%localappdata%\FiveM\FiveM.app\data` - Delete everything except `game-storage` *(unless you want to re-download FiveM builds)*
- `%appdata\CitizenFX` - GTA V settings, Custom FiveM keybinds, Rockstar Account info
  - This folder also contains one or two important folders: `kvs/` and `kvs_cl2/`. These folders include Key-Value Pair data that can be read by any resource using the natives such as `GetResourceKvpString()`. Some AntiCheats use these folders to cache your player data locally, if you don't delete these folders, even after spoofing, these AntiCheats can still re-ban you.

Clear your Recycle Bin

This step is considered pretty useless, but it's always better to do this

Quit all launchers, AntiCheats and AntiViruses from your system tray

Click the up arrow symbol located right on your taskbar and quit all game launchers (like Epic Games, Riot Client, Face IT ...), AntiCheats (like Vanguard, ...) or AntiViruses (Bitdefender, Kaspersky, disabled Windows Defender, ...)

(optional) Uninstall Xbox Services

- This step is optional, you can skip this step by creating and logging into a new Xbox (Microsoft) account

You can either use [Revo Uninstaller](#) or run the following commands in your elevated Powershell prompt (Run as Admin)

```
Get-AppxPackage Microsoft.XboxApp | Remove-AppxPackage
Get-AppxPackage Microsoft.Xbox.TCUI | Remove-AppxPackage
Get-AppxPackage Microsoft.XboxGameOverlay | Remove-AppxPackage
Get-AppxPackage Microsoft.XboxGamingOverlay | Remove-AppxPackage
Get-AppxPackage Microsoft.XboxIdentityProvider | Remove-AppxPackage
Get-AppxPackage Microsoft.XboxSpeechToTextOverlay | Remove-AppxPackage
```

```
Get-AppxPackage -Name Microsoft.GamingServices | Remove-AppPackage
winget uninstall 9MWPM2CQNLHN
```

After running these commands, go to `Settings -> Apps -> Installed Apps` and make sure there are no Xbox related apps.

(optional) New Steam Account

- This step is optional, it's only needed for servers that require you to have a `steam:` identifier present (Steam running in background)

Log out of your current steam account and login into a new one that you know wasn't banned before

(optional) A Solid VPN

- This step is optional, though **highly** recommended, as most AntiCheats are saving your IP too. If you can, get a residential VPN to avoid your IP getting flagged by VPN/Proxy detection services. VPN is also needed when you need to avoid a Discord server ban, as Discord issues IP Bans when you get banned from a server.

(optional) A new Discord Account

- This step is optional, it's only needed for servers that require you to have a `discord:` identifier present (Desktop version of Discord running and your account linked to FiveM)

Log out of your current Discord account and login into a new one. If you can, get an account that's at least few weeks old to avoid triggering suspicion filters.

Main Spoofing Process

1. Open your Susano loader and select Privacy Protector
2. Spoof
3. Open FiveM and join a server you were banned on before!

That's it!
